PLATFORM / PLATE-FORME / PLATAFORMA

Statement of Intent

I started involving in ICOMOS Thailand activities in 2003 as a young professional when ICOMOS Thailand hosted the Meeting of ICOMOS International Scientific Committee on Stone (ISCS). Since then I have been a member of working panel of ICOMOS Thailand on its International Conference which is held annually and continuously publishes the proceedings of each conference. Recently I have worked closer for ICOMOS Thailand as a member of the ICOMOS Thailand Committee. In addition, I also collaborate with ICOMOS International Scientific Committee on Risk Preparedness – ICORP in developing capacity-building activities on disaster risk management for cultural heritage to enhance the competency of conservation practitioners in Southeast Asia.

According to what I experienced in working with ICOMOS, it is obvious that I have been supported and obtained various opportunities in developing my expertise and professional, thus, if I am elected as ICOMOS Board member, I commit to continue and strengthen the influential, inspiring and innovative role of ICOMOS in the global society focusing on the emerging generation who will be handed down this practice in the future. Therefore I would like to propose the following strategies in order to achieve the commitment.

Influence heritage conservation professional by:

- Addressing the role of ICOMOS as a non-governmental organization that works for heritage conservation and protection by establishing and developing its conservation theory, methodology and scientific techniques for present-day circumstances
- Encouraging and supporting the establishment of the new national committees and/or activation of the existing National Committees
- Balancing ICOMOS activities to have various works in order to meet the expectation of members at any levels and interests

- Intensifying the collaboration among Advisory Bodies of the Convention Concerning the Protection of World Natural and Cultural Heritage 1972 (World Heritage Convention) so as to enhance the integrated heritage conservation principle and practice
- Strengthening collaboration with National Committees in developing conservation principles based on documents developed by our organization in order to synergize with context and circumstances of any respective countries/regions

Inspiration for the young generation to develop their heritage conservation practice by:

- Broadening the accessibility of young professionals to our organization by engaging them to ICOMOS international activities
- Ensuring ICOMOS charters, standards and principles being disseminated to the wider relevant groups of people via proper modern-day's tools i.e. online social network, special activities and etc.
- Cooperating with academic sectors in organizing learning activities for the young generation in order to get them involved in heritage conservation

Innovation and creativity in building heritage conservation approach and platform by

- Encouraging inter-collaboration among international scientific committees to find out and create new approaches in heritage conservation
- Bringing sustainable development into dialogue so as to demonstrate how people can benefit from conservation beyond the World Heritage Framework
- Promoting the adaptability and applicability of traditional knowledge system as well as people-based approach in heritage conservation and in disaster risk management for heritage
- Increasing visibility of our organization in society at the ground level through networking with a wide range of relevant organisations in order to get more support financially and technically from donors
- Providing more channels of interacting communication between ICOMOS and members for the increasing participation in ICOMOS activities

CURRICULUM VITAE

HATTHAYA Siriphatthanakun is currently a specialist in cultural heritage conservation at Southeast Asian Ministers of Education Organisation Regional Center for Archaeology and Fine Arts (SEAMEO SPAFA) where conservation meets education. She is in charge of professional development on cultural heritage conservation for 11 member countries in Southeast Asia through trainings, seminars and researches. For her 17-year- experience in working at various Thailand's governmental agencies especially the Fine Arts Department, Ministry of Culture, the main governmental agency in cultural heritage conservation, she had involved and developed her conservation professional and network as a conservation landscape architect. Apart from conservation practice, she provided consultation and recommendation for conservation projects as well as coordinated several regional activities in collaboration with various international organisations i.e. UNESCO, ICCROM and the Getty Conservation Institute. Since 2007 she has involved in Thailand's Memory of the World Programme and the World Cultural Heritage, ranging from preparing nomination dossiers, improving state of conservation of the World Cultural Heritage properties to developing a disaster risk management plan. Apart from a Bachelor degree in landscape architecture, Ms.Siriphatthanakun has also got a Master Degree in Conservation Studies from University of York, UK and now is conducting a research at the PhD Level focusing on water management in ancient cities. For the past ten years she has attended international training courses and workshops on various specific issues. At present she is appointed a member of Thailand ICOMOS Committee for 2016-2019.
